Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  length

Novel polypeptides and nucleic acids homologous to transmembrane receptor, thymosin, neuromodulin-like family of proteins for diagnosing, treating cancer, atherosclerosis, neurological, skin and autoimmune disorders

Claim 9a; Page 142; 323pp; English

The invention relates to 24 novel human proteins designated NOV1-NOV14 (ABB09501-ABB09524), collectively referred to as NOVX proteins, and nucleotides are useful in the treatment, diagnosis or prevention of NOVX-associated disorders or in the manufacture of a medicament for treating such disorders, with specific applications described for each of the 24 NOVX proteins, based on their homology to known proteins. Various cisorders (e.g., Albreimer's, Huntington's and Parkinson's diseases), disorders are associated with NoVX proteins including neurological disorders (e.g., Albreimer's, diabetes, thyroiditis, candiovascular disorders, or an autoinmune diseases), pain, behavioural disorders, diabetes, thyroiditis, cardiovascular disorders (e.g., Albreimer's), diabetes, thyroiditis, cardiovascular disease (e.g., hypertension), reproductive disorders, endometriosis, asthma, various forms of arthritis, diabetes, thyroiditis, cardiovascular disease (e.g., hypertension), reproductive disorders, endometriosis, asthma, various formsorlar endotheliosis, polycystic kidney disease, endocrine (e.g., hypertension), reproductive disorders, panoreatitis, circhosis, glomerular endotheliosis, polycystic kidney disease, endocrine (e.g., hypertension), reproductive disorders and disorders atherosclerosis, cell signal processing-related disorders and disorders atherosclerosis, cell signal processing-related disorders and disorders of metabolic pathway regularion. NoVX nucleic acids and polypeptides may be used to identify cellular receptors or downstream effectors which as neurogenesss, cell differentiation, cell motilise or inhibit processes such as neurogenesss, cell differentiation, cell motilise or inhibit and conting NOVX nucleic acids are used to identify a cell of determination of small models are used to identify and cloning NOVX nucleic acids are useful as course of primers or probes for forear or nucleic acids and forear information and ransagenic animals which are useful for studying the function and transgenic animals which of NOVX activity. The present sequence represents DNA encoding the prostatin precursor-like protein NOV14a. The gene encoding NOV14a is located on chromosome 16

The invention relates to 24 novel human proteins designated NOV1-NOV14 (ABB09501-ABB09524), collectively referred to as NOVX proteins, and nucleic acids encoding them (ABQ93879-ABQ93902). NOVX proteins and nucleotides are useful in the treatment, diagnosis or prevention of NOVX-associated disorders or in the manufacture of a medicament for treating such disorders, with specific applications described for each of the 24

NOVX proteins, based on their homology to known proteins. Various disorders are associated with NOVX proteins including neurological calcasorders (e.g., Alzheimer's, Huntington's and Parkinson's diseases), pain, behavioural disorders, addiction, tuberous sclerosis, cancers (e.g., colorectal cancer, leukaemia and osteosarcoma), immune diseases (e.g., allergies and autoimmune diseases), mysathenia gravis, asthma, various forms of arthritis, diabetes, thyroiditis, cardiovascular disease (e.g., hypertension), reproductive disorders, endometriosis, asthma, corringes, psoriasis, scleroderma, alopecia, ulcers, pancreatiis, cirhosis, glomerular endotheliosis, polycystic kidney disease, endocrine disorders, obesity, bacterial infections and particularly cardiomyopathy, atherosclerosis, cell signal processing-related disorders and disorders of metabolic pathway regulation. Novx nucleic acids and polypeptides may be used to identify cellular receptors or downstream effectors which binds to a NoVx protein, and are also useful as targets for the constitutioation of small molecules that modulate or inhibit processes such identification of small molecules that modulate or inhibit processes such as neurogenesis, cell differentiation, cell motility, cellular corrected as sequences can be used to identify a cell or tissue type and are useful as a source of primers or probes for forensic biology and for identifying and cloning NoVx homologues in other cell types. Cells comprising NOVX nucleic acids are useful for studying the function and cranimals which are useful for studying the function and confine and persent sequence represents DNA encoding the 9 1 gescerrierenceseceareseceasaasesesrerreseseerresecaserreseseer 1 GGGCCCTTGTCCTGGGCCATGGCCCAGAAGGGGGTCCTGGGGCCTGGGCAGCTGGGGCCT Gaps ٠, 6; Length 1102; Sequence 1102 BP; 162 A; 371 C; 353 G; 216 T; 0 U; 0 Other; Indels 0, DB 100.0%; Score 1102; 100.0%; Pred. Nucleic acids encoding novel human proteases, useful for useful

```
The present invention relates to the isolation of novel human proteases, and the nucleic acids encoding them. The sequences of the invention are useful for treating diseases and disorders such as cancers (e.g. breast, colon, lung), immune-related diseases and disorders (e.g. inflammatory diseases and asthma), cardiovascular diseases (e.g. restenosis and disorders (e.g. inflammatory thrombosis), brain or neuronal-associated diseases, metabolic coronary thrombosis), brain or neuronal-associated diseases, metabolic disorders (e.g. diabetes, obesity), inflammatory disorders (e.g. restenosis en continuous pain, sexual dysfunction, mood disorders, attention disorders, hypotension, hypertension, psychotic disorders, cognition disorders (e.g. Alzheimer's disease, Parkinson's disease) and dyskinesias. The nucleic acids and polypeptides are also useful for treating viral infections caused by human immunodeficiency virus (HIV), and non-viral infections such as ocular disease (e.g. virus (HIV), and mon-viral infections such as ocular disease (b.g. virus (HIV)).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           409
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     469

New isolated Protein Modification and Maintenance polypeptides, useful for diagnosis, and treatment of e.g. gastrointestinal disorders.

```
The invention relates to an isolated Protein Modification and Maintenance (PMM) polypeptide. Polypeptides of the invention may be used in the diagnosts, treatment and prevention of disorders associated with accreased expression or activity of PMMM. These include gastrointestinal disorders (e.g. Crohn's disease), cardiovascular disorders (e.g. en) typertension), autoimmune/inflammatory disorders (e.g. anaemia), cell hypertension), neurological disorders (e.g. Alzheimer's disease) creproductive disorders (e.g. Alzheimer's disease) creproductive disorders (e.g. ectopic pregnancy), and in gene therapy or a vaccine for such diseases. They may also be used in the assessment of the cffects of exogenous compound on the expression of nucleic acid and amino acid sequence represents a human PMMMM encoding sequence of the invention, encoding a polypeptide which has been found to have homology
                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                667

Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the prince of the production, but was obtained in CD-ROM format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TGGCCACATCTGCGGGGGGCTCCCTCATCGCCCCCTCTGGGTCCTCTCCGCTGCTCACTG 281

This invention comprises the cDNA and protein sequences of an isolated prostasin-like serine protease and reagents and methods for regulating the human prostasin-like enzyme activity. Prostasin is a trypsin-like care protease is useful fluid. An antibody specific the human protease purified from human seminal fluid. An antibody specific for prostasin-like serine protease is useful for immunodetection and diagnosis of micro-metastases, autoimmune lesions and renal failure in complete enzyme activity in a disease, such as metastasis of malignant cells, tumour angiogenesis, inflammation, chronic obstructive used to modulate enzyme activity in a disease, such as metastasis of collmonary disease (CDD), atherosclerosis, neurodegenerative disease (CDD), atherosclerosis, neurodegenerative disease (CDD), atherosclerosis, neurodegenerative disease (CDD), atherosclerosis, neurodegenerative disease (CDT), atherosclerosis, neurodegenerative disease (CDT), atherosclerosis, neurodegenerative disease crivity, in particular for treating or infection, particularly viral infection, particularly dental implants. Altered levels of human prostasin-like serine protease activity which may be useful to treat operaticularly dental implants. Altered levels of human prostasin-like corpusions and lipid accumulation and inhibit the progression of restenosis and atherosclerosis. The nucleic acid sequence is also useful in diagnostic and lipid accumulation and inhibit the progression of restenosis and atherosclerosis. The nucleic acid sequence is also useful in diagnostic and lipid accumulation and inhibit the progression of restenosis and atherosclerosis. The nucleic acid sequence is also useful in diagnostic and lipid accumulation and inhibit the sormal sequence of mutations in nucleic acid sequences which encode the enzyme. The present sequence represents the human prostasin-like serine protease #1 nucleotide sequence of the invention ö Novel human prostasin-like serine protease polypeptide and polynucleotide which can be regulated for treating metastasis of malignant cells, inflammation, atherosclerosis, neurodegenerative disease and infections. The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PRR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed activity of (II) or to treat disease tates involving (II). (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease tates involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    460
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             169
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        520
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       580
polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at fitp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GTCTCTACAGCCAGCCCGGTCCCTTCAACCTCTCCAGATATTGCCAGGATGCTGT

This invention comprises the cDNA and protein sequences of an isolated prostasin-like serine protease and reagents and methods for regulating the human prostasin-like enzyme activity. Prostasin is a trypsin-like serine protease purliated from human seminal fluid. An antibody specific control of micro-metastases, autoimmune lesions and renal failure in diagnosis of micro-metastases, autoimmune lesions and renal failure in biopsy specimens, plasma samples and body fluids. The antibody may be used to modulate enzyme activity in a disease, such as metastasis of malignant cells, tunmour angiogenesis, inflammation, chronic obstructive pulmonary disease (COPD), atherosclerosis, neurodegenerative disease. (C-g-g-prion protein amyloid plaques of Genstmann-Straussler Syndrome, creuzfeldt-Jakob disease, Scrapie) or infection, particularly viral infection. The human prostasin-like serine protease gene provides a therapeutic target of decreasing human prostasin-like serine protease cutyity, in particular for treating or preventing metastatic cancer. The agonists and antagonists of the nucleotide sequence may be used to mimic, anyment and inhibit the enzyme activity which may be useful to treat correct particularly dental implants. Altered levels of human prostasin-like serine protease activity inhibits both smooth muscle cell proflegation and inhibit the progression of restenosis and appropreduced the progression of restenosis and appropriating the progression of restenosis and appropriation and inhibit the progression of restenosis and appropriation and inhibit the progression of restenosis and approached the progression of restenosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      25
                                                                                                                                                                                                                                                                                                                      Novel human prostasin-like serine protease polypeptide and polynucleotide which can be regulated for treating metastasis of malignant cells, inflammation, atherosclerosis, neurodegenerative disease and infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         athercaclerosis. The nucleic acid sequence is also useful in diagnostic assays for detecting diseases and abnormalities or susceptibility to diseases related to the presence of mutarions in nucleic acid sequences which encode the enzyme. The present sequence represents the human prostasin-like serine protease #2 nucleotide sequence of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cecededentabacacerredidadadadadadacinacradadadadada

Б à 엄 ठ 임 à ö The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Frimers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enrich cDNA. The full ength clones were synthesised by the oligo-capping method. The primers libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is the nucleotide sequence of the s'-end of a cDNA provided in the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO 221 830 Primers useful for synthesizing full length cDNA clones and their use Gaps Koga H; . 0 The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence was used as the representative sequence from a human clone which was used in homology searches to identify the clone. Note: The sequence data for this parent did not form part of the printed specification, but was obtained in CD-ROM format directly from 830 Primers useful for synthesizing full length cDNA clones and their use in genetic manipulation. 521 535 0; Gaps CGCCAGCCTGGGCCCCGCCCTGTCTGCCTGCCCCGCGCCTCCACACCGCTTTCGT 476 GGCCAGCCTGGGCCCGCGTGTGGCCTGTCTGCCCCCCGCGCCTCACACCGCTTCGT GGCCAACTACAGCCAAGTGGAGCTGGGCCGGACCTGGCCCTGCTGCCTGGCCTCACC Ħ, Kawai Y; T, Koga Example 11; SEQ ID NO 1916; 1380pp + Sequence Listing; English. The present sequence encodes a human secreted polypeptide. The secreted polypeptides and polymucleotides are useful for treating nervous and polymucleotides are useful for treating nervous and mescular diseases, for inhibiting tumour formation and metastasis, for treating apartrointestinal ulceration, for preventing and treating diseases in spinal cord, thyroid gland, ovary, prostate, renal gland, colon, for treating lippase deficiency in cystic fibrosis and colon, for treating lippase deficiency in cystic fibrosis and pancreatitis, for treating undesirable clot formation such as myocardial pancreation, during angioplasty and all surgical procedures that require decreased blood clot formation, for treating liver diseases, coagulation discorders and microbial diseases, for treating immune disorders, for treating inflammation and transplant rejection, for enhancing bone transplant rejection, for enhancing bone thickness and increasing apoptosis, and for regulating vascular ferroxidases, for suppressing apoptosis, and for regulating vascular smooth cell proliferation. They may also be used as vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed considerable. (II) is useful in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of supplement. (II) and (II) and (II) are useful for treating disorders of supplement protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in capponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. Aas&4497-AAS$94564 represent novel human diagnostic coding sequences. Aas&4497-AAS$94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this contine the printed specification, but was obtained in the print of the contine of the
